

NSF SPONSORED WORKSHOP:

Training Professionals to Prepare STEM Undergraduates for Research

June 15-17, 2017

**University of Central Florida
Orlando, FL**

Priority Application Deadline: December 9

Join us for a three day professional development event at the University of Central Florida. This workshop is designed to disseminate educational tools and strategies for implementing several types of undergraduate pre-research courses. 27 positions are available.

Sponsored by the National Science Foundation, accepted participants to this **no-cost** workshop will receive a travel stipend to offset coming to the workshop.

The workshop seeks to help increase the number of undergraduates participating in research at institutions and the quality of the experience for those students, particularly those from target populations of interest to the attending institutions (e.g., transfer students, first

generation, underrepresented). Participation in undergraduate research has shown to increase student success in undergraduate studies and in the workforce as well as increase STEM retention.

The workshop is designed for faculty and professional staff who are interested in learning how to teach pre-research programming/courses on their own campus.
